MORBIDITY AND HOSPITALIZATION DATA FOR INDIVIDUAL STATIONS.	33

WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on a duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

COMMENT ON CURRENT TRENDS

MORBIDITY FROM: All Causes:

(See Chart on page 3.)

Morbidity from all causes during the week ended 4 January increased (by 28 percent) to 569 admissions per thousand troops per annum.

It should be noted, in evaluating morbidity rates for this period, that a large proportion of Army troops were absent from their bases on leaves, furloughs, and passes. Further, during the holiday season, many men do not report minor illnesses.

Injury:

(See Chart on page 3.)

Injury admissions increased during the week, from 26 to 34 per thousand. Highest rates were those reported from the Sixth and Ninth Service Commands (35 and 52 per thousand, respectively), ranging down to 23 per thousand in the First Service Command.

Diseases:

(See Chart on opposite page.)

Morbidity from all diseases in the United States as a whole increased (by 28 percent) during the week to 535 admissions per thousand troops per annum (about 10 percent under the rate of 561 reported in 1945 for the corresponding week).

Sharp increases are noted in all service commands.

Respiratory Diseases:

(See Chart on opposite page.)

The rate for colds, influenza, etc, increased during the week (143 per thousand to 156 per thousand) exceeding the rate for the corresponding period last year by over 13 percent. Morbidity from these causes increased in all service commands except the Eighth and Ninth. Morbidity continued highest in the Military District of Washington (297 admissions per thousand troops per annum), and was lowest in the Ninth Service Command (115 per thousand).

In the Fifth, Sixth and Ninth Service Commands this year's rates were below those reported in the corresponding period of 1945.

Admissions for all forms of primary pneumonia remained at 15 per thousand troops per annum, while the rate for primary pneumonias other than atypical moved during the week from 5.8 to 6.1. One year ago this rate was 4.4 and 4.2 per thousand, while it had reached 13.3 and 13.4 in these weeks two years ago.

Primary pneumonia admissions (for all forms) decreased in the Fourth, Fifth and Eighth Service Commands; rates ranged from 23 per thousand in the MDW to 9 in the Fifth Service Command.

NONEFFECTIVE RATE

CONTINENTAL UNITED STATES

PATIENTS REMAINING IN HOSPITAL

CONTINENTAL UNITED STATES

COMMENT ON CURRENT TRENDS (CONT.)

Venereal Diseases:

New admissions for non-EPTS venereal diseases increased during the week from 41 to 59 per thousand troops. The rate increased in all service commands; morbidity incidence ranged from 99 new admissions per thousand troops in the Third Service Command to 26 per thousand in the First.

Other Communicable Diseases:

Incidence of diarrhea and dysentery increased to 4 admissions per thousand troops per annum; rates of 6 admissions per thousand troops per annum were noted in the First and Ninth Service Commands.

NONEFFECTIVE RATE:

(See Chart on page 6.)

The noneffective rate for personnel stationed in the continental United States is estimated at 34.4 per thousand troops per day for the week ended 4 January as compared with 33.8 per thousand for the corresponding week of 1945.

PATIENTS REMAINING UNDER TREATMENT: 4 JANUARY 1946:
(See Chart on page 6.)

The number of patients remaining in hospital in the Zone of Interior, including patients transferred from overseas, increased during the week to 164,509 as compared with 159,465 at the end of the previous week.

The number of neuropsychiatric cases remaining was 11,934 or about 800 more than at the end of the previous week. Non-battle injury patients remaining numbered about 28,470. The number of battle casualty patients remaining decreased by about 500 to 41,761.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

(See Chart on page 8.)

In the week ended 4 January there were 1613 enlisted personnel discharged by CDD (969 less than in the previous week). Fifty-four percent of these discharges were reported by general hospitals and 16 percent by convalescent hospitals. Among these CDD's were 324 neuropsychiatric cases, about 100 less than in the previous week.

CERTIFICATES OF DISABILITY FOR DISCHARGE

MORBIDITY FROM VENEREAL DISEASES

TOTAL ARMY

CONTINENTAL UNITED STATES

ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

ANALYSIS OF VENEREAL DISEASE DATA

This report, covering the five-week period ended 30 November 1945, presents an analysis of incidence of the venereal diseases among colored males and all other personnel for all units in the continental United States which submit Statistical Health Reports (WD AGO Forms 8-122). Data are shown for individual stations where the colored male strength was 1000 or more; for other units in each service command the data are shown in total only.

The chart on the opposite page shows admissions for venereal diseases in the Army as a whole during the war period. It will be noted that increases in the total rates and the "excluding EPTS" rates took place in November and that morbidity from these causes remained at levels well above those experienced since December 1941. The admission rate for syphilis, excluding EPTS cases, increased to 9 during November, from 7 per thousand reported in October and 6 per thousand in September.

CONTINENTAL UNITED STATES

ANNUAL RATE OF ADMISSION PER 1000 STRENGTH

ANALYSIS OF VENEREAL DISEASE DATA (CONT'D)

The average weekly number of admissions for EPTS venereal diseases during November was 190, as compared with 217 cases per week in October.

Charts on pages 22 and 23 show morbidity from the venereal diseases among colored males and other Army personnel. Admission rates for venereal diseases acquired in the Army among colored males continued to increase for gonorrhea and syphilis, while admissions for other venereal diseases increased during November from 14 to 18 admissions per thousand troops. Among other personnel, however, the incidence of gonorrhea dropped from the rate of 30 per thousand troops per annum reported in October to 29 in November, while the rate for syphilis rose from 4 to 5 per thousand.

Rates for gonorrhea among colored male personnel decreased or remained substantially unchanged in the First, Fourth, and Eighth Service Commands and the Military District of Washington, while syphilis rates

for this group increased in all service commands. Among personnel other than colored males, gonorrhea admission rates increased in the Fourth and Eighth Service Commands and the MDW. Highest morbidity was reported from the Fifth Service Command, where the rate remained at 42 per thousand, while rates of incidence below 20 per thousand were noted in the First, Second, and Ninth Service Commands and the MDW.

The number of noneffectives suffering from venereal diseases in the Army as a whole rose to 87 per thousand troops per day during November; among colored troops, 6.70 in each thousand were excused from duty because of venereal diseases in November (5.30 in October) while the noneffective rate for other personnel increased from .44 in October to .45 in November.

At the end of November, 1261 patients were remaining under treatment for syphilis; of these, 279 were receiving specialized treatment for the disease at general hospitals.

VENEREAL DISEASE ADMISSION RATES[†]

RESTRICTED

VOLUME VI REPORT NO. 1 FOR STATIONS HAVING COLORED MALE STRENGTH OF 1000 OR OVER
FOR THE 5 WEEK PERIOD ENDING 30 November 1945

[illegible]

FORM SG-727 REVISED 17 February 1945

* DOES NOT INCLUDE READMITTED CASES (I.E. CASES PREVIOUSLY REPORTED BY AN ARMY UNIT.)
† ANNUAL RATES PER 1000 STRENGTH.

ARMY SERVICE FORCES
OFFICE OF THE SURGEON GENERAL
MEDICAL STATISTICS DIVISION

RESTRICTED

WOMEN'S ARMY CORPS

During December special WAC reports were received from 50 selected stations which included most of the stations in the United States having a WAC strength of over 300. The WAC strength of 50 reporting stations was about 40 percent of the total WAC strength in the continental United States.

During the four-week period ended 28 December the annual admission rate from all causes among WAC personnel at 50 selected stations increased (by 12 percent) to 893 per annum per thousand strength. The December admission rate from all causes for the WAC was 66 percent above that for the total Army in the continental United States, reflecting the well-known fact that morbidity among women is considerably higher than among men.

Morbidity from all causes during December varied appreciably by station, reflecting in large part the relatively small numbers of personnel at most of the reporting installations. The all causes admission rates in general ranged from 300 to 1500 per thousand. Fort Devens, Mass, Fort Bragg, N C were the only stations which reported rates in excess of 2200 per thousand (2223 per thousand, and 2471 per thousand respectively).

The December admission rate from injuries for the WAC increased to 40 per thousand as compared with 29 per thousand for the total Army in the United States.

Morbidity from colds, influenza, etc, increased from 181 per thousand in November to 313 per thousand in December which was over twice as high as the corresponding rate for the Army as a whole.

Morbidity from all forms of pneumonia was reported at 9 per thousand in December as compared with 14 per thousand reported for the Army as a whole.

Morbidity from diarrhea and dysentery for the WAC was reported at 6 per thousand, which is about 50 percent higher than the December rate for the total Army.

In December neuropsychiatric disorders among the WAC accounted for an admission rate of 13 per thousand, an increase of about 30 percent from the previous month.

The number of CDD's at the 50 selected WAC stations averaged about 13 per week during December as compared with a weekly average of about 17 during the six-month period of March through November.

WOMEN'S ARMY CORPS (CONT'D)

As of 28 December there were 424 WAC patients remaining in hospital and quarters at the 50 selected stations. In addition to the 378 WAC's remaining in hospital at the selected stations there were 618 WAC's occupying beds in general hospitals (exclusive of Tilton, and Walter Reed, which are among the selected stations). The number of WAC's occupying beds at Station, Regional, and Convalescent Hospitals, exclusive of the 50 selected stations, was 390. Thus, the total number of WAC's occupying hospital beds as of the end of December was 1386.

The number of WAC's occupying hospital beds as of the end of December represented a rate of about 35 per thousand strength of the WAC in the continental United States. For the total Army in the continental United States the corresponding figure was in the neighborhood of 32 per thousand when evacuees from overseas were excluded.
